Plotly Object Graph

Create simple bar chart

```
import plotly.graph_objects as go
language=['Python','R language','Tableau',"Power BI",'SQL']
marks=[80, 75, 42, 78, 60,68]
fig=go.Figure(go.Bar(x=language,y=marks))

fig.show()
```

create Grouped Bar Chart

```
import plotly.graph_objects as go
language=['Python','R language','Tableau',"Power BI",'SQL']
marks=[80, 75, 42, 78, 60,68]
fig=go.Figure([go.Bar(x=language,y=marks,name='aws'),go.Bar(x=language,y=[60,6
7,45,34,78,90],name='gcs')])

fig.show()
```

To create a stacked bar chart,

```
import plotly.graph_objects as go
language=['Python','R language','Tableau',"Power BI",'SQL']
marks=[80, 75, 42, 78, 60,68]
fig=go.Figure([go.Bar(x=language,y=marks,name='aws'),go.Bar(x=language,y=[60,6
7,45,34,78,90],name='gcs')])
fig.update_layout(barmode='stack')
fig.show()
```

To sort the values within a bar chart,categoryorder ascending and similar for descending order to

```
import plotly.graph_objects as go
language=['Python','R language','Tableau',"Power BI",'SQL']
marks=[80, 75, 42, 78, 60,68]
fig=go.Figure([go.Bar(x=language,y=marks,name='aws'),go.Bar(x=language,y=[60,6
7,45,34,78,90],name='gcs')])
fig.update_layout(barmode='stack',xaxis={'categoryorder': "total ascending"})
fig.show()
```

Pie chart

A Pie Chart displays only one series of data.

Pie Charts show the size of items in one data series, proportional to the sum of the items. Data points are shown as a percentage of the whole pie.

The **pie()** function in **graph_objs** module – **go.Pie()**, returns a Pie trace. Two required arguments are **labels** and **values**.

```
import plotly.graph_objects as go
language=['Python','R language','Tableau',"Power BI",'SQL']
marks=[80, 75, 42, 78, 60,68]

trace=go.Pie(labels=language,values=marks)
data=[trace]

fig=go.Figure(data=data)
fig.show()
```

update traces and line width and color

```
import plotly.graph_objects as go
language=['Python','R language','Tableau',"Power BI",'SQL']
marks=[80, 75, 42, 78, 60,68]
colors = ['darkred', 'magenta', 'cyan', 'darkorange', 'darkblue', 'gold']

traces=go.Pie(labels=language,values=marks)

data=[traces]
fig=go.Figure(data=data)

fig.update_traces(marker=dict(colors=colors,line=dict(color='black',width=2)))

fig.show()
```

Showing the Text Inside Pie Sectors

We can also display the percentage and the labels of the data inside the pie sectors using the textinfo parameter of the Pie class.

```
traces=go.Pie(labels=language,values=marks,textinfo='label+percent')
```

```
traces=go.Pie(labels=language,values=marks,textinfo='label+percent',hole=.5,in
sidetextorientation='radial')
```

```
import plotly.graph_objects as go
language=['Python','R language','Tableau',"Power BI",'SQL']
marks=[80, 75, 42, 78, 60,68]
colors = ['darkred', 'magenta', 'cyan', 'darkorange', 'darkblue', 'gold']

traces=go.Pie(labels=language,values=marks,textinfo='label+percent',pull=[0,0,
0,0,.1])

data=[traces]
fig=go.Figure(data=data)

fig.update_traces(marker=dict(colors=colors,line=dict(color='black',width=2)))

fig.show()
```
